

# Available Edge Treatments

## Notes:

1. The term "Eased Edge" more commonly refers to a slightly radiused profile rather than a slightly chamfered profile, although the use of the term regionally and/or with specific fabricators. In either case, the edge treatment is slight, and normally does not exceed 1/16th of an inch (1.5 mm).
2. "Pencil Round" generally refers to a radius near that of a standard pencil, approximately 1/8th of an inch to 5/32nds of an inch (3mm to 4mm).
3. Radius, Chamfer, or Cove edge profile can be any dimension. The actual dimension should be specified at time of sale. Chamfers are most commonly 45°, although not necessarily so.
4. Many of the profiles shown on this drawing can be done with laminated edge details.
